Infosafe No™

Issue Date : February 2019

RE-ISSUED by CHEMSUPP

1CH2L

Product Name : DICHLOROMETHANE / METHYLENE CHLORIDE

Classified	as	hazardous

1. Identification		
GHS Product	DICHLOROMETHANE / METHYLENE CHLORIDE	
Identifier		
Company Name	CHEM-SUPPLY PTY LTD (ABN 19 008 264 211)	
Address	38 - 50 Bedford Street GILLMAN	
Tolonhone / Cov	SA 5013 AUSTRAIIA	
Number	Fax: (08) 8440-2001	
Emergency phone	CHEMCALL 1800 127 406 (Australia) / +64-4-917-9888 (International)	
number		
Recommended use	Solvent degreasing, paint removers, aerosol propellant, plastics process	ing, blowing agent in foams,
of the chemical and	insecticide, solvent extraction, solvent for cellulose acetate, analytical rea	agent and laboratory reagent.
restrictions on use		
Other Names	Name	Product Code
	DICHLOROMETHANE LR, stabilised with amylene	ML012
	DICHLOROME I HANE AR, stabilised with amylene	MAU12
	WEINTLENE UNLUKIUE IG Methylene hichloride, Methylene dichloride	IVI I U I Z
Other Information		
	Chem-Supply Pty Ltd does not warrant that this product is suitable for an	y use or purpose. The user
	must ascertain the suitability of the product before use or application inte	nded purpose. Preliminary
	testing of the product before use or application is recommended. Any rel	iance or purported reliance
	upon Onem-Supply Pty Ltd with respect to any skill or judgement or advice	ce in relation to the suitability of
	any statute as to the merchantable quality of this product or fitness for an	a law, any condition implied by
	This product is not sold by description. Where the provisions of Part V. D	ivision 2 of the Trade Practices
	Act apply, the liability of Chem-Supply Pty Ltd is limited to the replaceme	nt of supply of equivalent goods
	or payment of the cost of replacing the goods or acquiring equivalent good	ods.

Infosafe No™ 1CH2L

Issue Date : February 2019

RE-ISSUED by CHEMSUPP

Product Name : DICHLOROMETHANE / METHYLENE CHLORIDE

	Classified as hazardous		
Clean-up Methods -	drum or overdrum. Seek expert advice on handling and disposal.		
Environmental PrecautionsPrevent from spreading or entering into drains, ditches or rivers by using sand, earth, or other appropriate barriers.			
7. Handling and s	storage		
Precautions for Safe Handling	When opening containers, avoid inhalation of headspace gases. Avoid prolonged or repeated contact with skin, eyes and clothing . Ensure the appropriate personal protective equipment is used when handling this material. Use in well ventilated areas away from all ignition sources. In case of insufficient ventilation, wear suitable respiratory equipment. Wash hands and face thoroughly after working with material. When using do not eat, drink or smoke. Open containers with care - volatile solvent. Do not use during welding, or near heat or where oxygen levels are increased. Product is not flammable under conditions likely to be encountered, but does form flammable areas have a solvent.		
Conditions for safe	Keep container tightly closed and in a cool, well-ventilated place. Keep away from heat and other		
storage, including	sources of ignition. Keep containers securely sealed and protected against physical damage. Store		
any	away from oxidizing agents. Store away from strong bases. Store away from metallic aluminium		
incompatabilities	powder. This material may corrode plastic and rubber. All storage containers should be galvanised or		
Corrosiveness	Liquid methylene chloride may attack some forms of plastics, rubber and coatings. Non-corrosive in presence of glass.		
Storage Regulations	Refer Australian Standard AS/NZS 4452:1997 'The storage and handling of toxic substances'.		
Additional	Dangerous levels of exposure may occur before the odour is sensed as the odour threshold (205-307		
information on precautions for use	ppm) is above the TWA (50 ppm).		
8 Exposure cont	rols/personal protection		
Occupational	Name STEL TWA		
exposure limit			
values			
	<u>mg/m3 ppm mg/m3 ppm Footnote</u>		
Other Exposure Information	Dichloromethane17450'SK' notice - absorption through the skin may be a significant source of exposure. The exposurestandard is invalidated if such contact should occur. These Workplace Exposure Standards are guidesto be used in the control of occupational health hazards. All atmospheric contamination should be keptto as low a level as is workable. These workplace exposure standards should not be used as fine		
Appropriate engineering controls	dividing lines between safe and dangerous concentrations of chemicals. They are not a measure of relative toxicity. A time weighted average (TWA) has been established for Dichloromethane (Safe Work Australia) of 174 mg/m ³ , (50 ppm). The exposure value at the TWA is the average airborne concentration of a particular substance when calculated over a normal 8 hour working day for a 5 day working week. In industrial situations maintain the concentrations values below the TWA. This may be achieved by process modification, use of local exhaust ventilation, capturing substances at the source, or other methods. These methods should be used in preference to personal protective equipment.		
Respiratory Protection	Where ventilation is not adequate, respiratory protection may be required. Avoid breathing dust, vapours or mists. Respiratory protection should comply with AS 1716 - Respiratory Protective Devices and be selected in accordance with AS 1715 - Selection, Use and Maintenance of Respiratory Protective Devices. Filter capacity and respirator type depends on exposure levels. In event of emergency or planned entry into unknown concentrations a positive pressure, full-facepiece SCBA should be used. If respiratory protection is required, institute a complete respiratory protection program including selection, fit testing, training, maintenance and inspection.		
Eye Protection	The use of a face shield, chemical goggles or safety glasses with side shield protection as appropriate. Must comply with Australian Standards AS 1337 and be selected and used in accordance with AS 1336.		
Hand Protection	Hand protection should comply with AS 2161, Occupational protective gloves - Selection, use and maintenance. Gloves: Ansell Laminate Film (Barrier), or Supported Polyvinyl Alcohol (PVA).		
Personal Protective Equipment	Personal protective equipment should not solely be relied upon to control risk and should only be used when all other reasonably practicable control measures do not eliminate or sufficiently minimise risk. Guidance in selecting personal protective equipment can be obtained from Australian, Australian/New

Infosafe No™	1CH2L Issue Date : February 2019 RE-ISSUED by CHEMSUPP		
Product Name : I	DICHLOROMETHANE / METHYLENE CHLORIDE		
	Classified as hazardous		
Footwear	Zealand or other approved standards. Safety boots in industrial situations is advisory, foot protection should comply with AS 2210, Occupational protective footwear - Guide to selection, care and use		
Body Protection	Clean clothing or protective clothing should be worn, preferably with an apron. Clothing for protection against chemicals should comply with AS 3765 Clothing for Protection Against Hazardous Chemicals.		
Hygiene Measures	Always wash hands before smoking, eating or using the toilet. Wash contaminated clothing and other protective equipment before storing or re-using.		
9. Physical and c	hemical properties		
Form	Liquid		
Appearance	Clear, colourless volatile liquid.		
Odour	Penetrating chloroform-like odour; characteristic odour.		
Melting Point	-9597.0 °C		
Boiling Point	~ 39.75 °C @ 760 mm Hg		
Solubility in Water	Slightly soluble (20 g/L @ 20 °C).		
Solubility in Organic Solvents	Soluble in alcohol, diethyl ether, acetone, DMF.		
Specific Gravity	1.326		
рН	~7 (20 °C)		
Vapour Pressure	475 hPa (20 °C)		
Vapour Density (Air=1)	2.9		
Evaporation Rate	27.5		
Viscosity	0.430 mPas (20 °C)		
Partition Coefficient: n-octanol/water	: log Pow: 1.25		
Flammability	Non flammable.		
Auto-Ignition Temperature Flammable Limits -	605 °C		
Lower Flammable Limits -	22%		
Upper Molecular Weight	84.93		
Other Information	Dielectric constant: 9.1 (@ 20 °C) Dipole moment: 1.6 Debye (@ 20 °C) Heat of evaporation: 329 kJ/kg (@ 40 °C) Refractive index: 1.4246 (@ 20 °C) Saturation concentration: 1549 g/m3 (@ 20 °C) Heavy vapours		
10. Stability and	reactivity		
Chemical Stability	Stable under normal use conditons.		
Conditions to Avoid	Moisture. Heat, flames, ignition sources and incompatibles.		
Incompatible Materials	Chemically active metals (in powder form), eg. magnesium metal and aluminium powder, sodium, potassium and lithium. Alkali metals, alkaline earth metals, alcoholates, alkali amides, electrical arcs, heat, nitric acid, nitric oxides, nonmetallic oxides, Oxidising agents, open flames, oxygen, plastics, perchloric acid, Potassium permanganate in water, strong bases and water. Unsuitable working materials: Liquid methylene chloride will attack some forms of plastics, rubber, light metals, steel and coatings.		
Hazardous Decomposition Products	Toxic phosgene gas, oxides of carbon and corrosive hydrogen chloride gas.		
Possibility of hazardous reactions	Forms flammable air/vapour mixture above 100 °C. Decomposes in a flame or on a hot surface to form toxic phosgene gas and corrosive mists of hydrochloric acid.

RE-ISSUED by CHEMSUPP

Infosafe No™ 1CH2L

Issue Date : February 2019

Product Name : DICHLOROMETHANE / METHYLENE CHLORIDE

Classified as hazardous

Hazardous Polymerization	Will not occur.
11. Toxicological	Information
Acute Toxicity - Oral	LD50 (rat): >2000 mg/kg.
Ingestion	May cause irritation of the gastrointestinal tract with vomiting. If vomiting results in aspiration, chemical pneumonia could follow. Absorption through gastrointestinal tract may produce symptoms of central nervous system depression ranging from light headedness to unconsciousness. Symptoms of overexposure include fatigue, weakness, sleepiness, light headedness, numbness or tingle of limbs, gastrointestinal discomfort, drowsiness, irregular breathing, nausea and vomiting. May lead to central nervous system depression. Vomiting may result in aspiration followed by chemical pneumonitis. Swallowing in large quantities may result in liver and kidney damage. Rapidly absorbed through the
Inhalation	gastrointestinal tract. Inhalation of mists or aerosols produces upper respiratory (nose, mouth, throat, lungs) irritation and mucousal irritation. Has a strong narcotic effect with symptoms of mental confusion, light-headedness, fatigue, weakness, sleepiness, numbness or tingling of limbs, dizziness, nausea, vomiting and headache. Dichloromethane vapour is readily absorbed by the lungs. The chemical displaces oxygen from the air by forming carbon monoxide in blood which affects cardiovascular system and central nervous system. May lead to central nervous system depression, unconsciousness and possible death. Continued exposure may cause increased light-headedness, difficulty in breathing, staggering, unconsciousness, and even death. Rapidly absorbed through the upper respiratory tract.
Skin	Contact with skin may result in irritation, redness and pain. Will have a degreasing action on the skin, possibly followed by secondary inflammation. May be absorbed through skin. Symptoms include irritation, redness and pain. Prolonged contact can cause burns. Prolonged or repeated contact with skin may cause defatting, dermatitis. Rapidly absorbed through the mucous membranes and the skin.
Eye	A moderate eye irritant. High concentrations of vapours will cause irritation. Symptoms include redness, pain, inflammation, watering, provokes tears, blurred vision and itching, which may lead to conjunctivitis and temporal eye damage.
Carcinogenicity	Listed as a carcinogen, category 3 in Hazardous Substances Information System - Safe Work Australia.
Chronic Effects	Category 3 - Substances suspected of having carcinogenic potential are those substances which have possible carcinogenic effects on humans but in respect of which the available information is not adequate for making a satisfactory assessment. There is some evidence from appropriate animal and epidemiological studies, but this is insufficient to place the substance in Category 2. Repeated or prolonged skin contact may cause chronic dermatitis. Could cause headaches, mental confusion, depression, liver effects, kidney effects, bronchitis, loss of appetite, nausea, lack of balance, and visual disturbances. Methylene chloride may cause cancer in humans. Evidence from animal tests indicate that repeated or prolonged exposure to this chemical could result in reproductive system disorders. Rapidly absorbed through the upper respiratory tract, gastrointestinal tract and skin. Absorption of large quantities causes CNS disorders, drowsiness, dizziness, drop in blood pressure, cardiac dysrbythmia, respiratory paralysis, respiration depression, and narcosis.
Other Information	An Existing Chemical Information Sheet has been prepared for this chemical by NICNAS available from their website. The conclusion to Safe Work Australia's documentation for the exposure standards for methylene chloride has been reproduced below. 'Occupational exposure to methylene chloride is primarily via inhalation and by skin contact. In humans, methylene chloride is readily absorbed via the lungs and to some extent through the skin. The uptake of methylene chloride through the lungs is directly proportional to exposure. Its absorption increases with increased physical activity and body fat percentage. The metabolism of methylene chloride is via two metabolic pathways: the cytochrome P450-dependent transformation to carbon monoxide and the glutathione-S-transferase-dependent metabolism to formaldehyde and formic acid. The first metabolic pathway results in elevated levels of COHb and increased levels of CO in expired air. This pathway is rate limited by enzyme saturation so that at high doses, the blood level of COHb becomes constant and independent of dose. Blood COHb is elevated for longer periods for methylene chloride retained in body tissues following exposure. The combined effect of smoking and exposure to methylene chloride will produce an additive increase in blood COHb values.

Infosafe No™	1CH2L Issue Date : Febru	ıary 2019	RE-ISSUED by CHEMSUPP
Product Name :	DICHLOROMETHANE / METHYLENE	CHLORIDE	
	Classified as haz	ardous	
	exposures to the chemical. Data from controlle individuals exposure to methylene chloride vap of about three per cent, which is less than the i to CO alone at 35 ppm for eight hours.	d human studies ind our to 100 ppm for e ncrease in blood CO	icate that for sedentary, non-smoking ight hours will produce a blood COHb Hb levels produced by an exposure
	From a series of epidemiological studies condu one plant and median exposure from 140 to 47 liver cancers, ischaemic heart disease or morta was an equivocal increase in biliary cancer in c	icted at two plants, w 5 ppm at the other, t ality compared with th one study and pancre	with the mean exposure of 26 ppm at here was no increase in lung and hat of the general population. There eatic cancer in the other.
	In short-term repeated dose studies in animals than 1000 ppm indicate that the liver and CNS than 10,000 ppm, deaths from pulmonary cong evidence of teratogenicity.	, exposure to methyle are the primary targe estion occurred. In re	ene chloride concentrations greater et organs. At concentrations greater eproductive studies there was no
	Chronic inhalation studies in rats, hamsters and increase in benign mammary tumours, and in r salivary gland region; in mice, an increase in th significant increase in the incidence of tumours	d mice at high dose l nale rats an increase le incidence of lung a l.	evels have revealed: in rats, an ed incidence of sarcomas in the and liver tumours; and in hamsters no
	Methylene chloride is mutagenic in the Ames a complicated by the fact that the bacteria used i activity was observed in some mammalian cell	ssay but the interpre n these assays meta cultures. No mutage	tation of these results are abolise methylene chloride. Mutagenic nic activity was observed in vivo.'
12. Ecological in	formation		
Bioaccumulative	No bioaccumulation is to be expected (log P(o/	w) <1.0).	
Potential Short Summary of Assessment of Environmental	The LC50/96-hour values for fish are over 100 life.	mg/l. This material i	s not expected to be toxic to aquatic
Environmental Protection	Do not allow product to enter drains, waterways	s or sewers.	
Acute Toxicity - Fish	LC50 (Pimephales promelas-fathead minnow):	193 mg/l/96 h	
Acute Toxicity - Daphnia	EC50 (Daphnia magna-Water flea): 1682 mg/l/	48 h	
13. Disposal con	siderations		
Disposal Considerations	Whatever cannot be saved for recovery or recy disposed of according to relevant local, state a	rcling should be hand nd federal governme	dled as hazardous waste and ent regulations.
14. Transport inf	ormation		
Transport Information	Dangerous Goods of Class 6 (Toxic and Infecti any of the following: Class 1, Class 3, if the Class 3 dangerous good goods are cyanides and the Class 8 dangerous food packaging in any quantity. 1593	ous Substances) are ds are nitromethane, s goods are acids; ar	incompatible in a placard load with Class 8, if the Class 6 dangerous ad are incompatible with food and

Infosafe No™ 1CH2L

RE-ISSUED by CHEMSUPP

Product Name : DICHLOROMETHANE / METHYLENE CHLORIDE

	Classified as hazardous
Regulatory Information Poisons Schedule	Listed in the Australian Inventory of Chemical Substances (AICS). Not listed under WHS Regulation 2011, Schedule 10 - Prohibited carcinogens, restricted carcinogens and restricted hazardous chemicals. S5
Hazard Category	Harmful

Issue Date : February 2019
