

## SWITCH, SPST / DPST – toggle

Cat: LB3960-050 SPST toggle switch

LB3960-060 DPST toggle switch

### DESCRIPTION:

The IEC **Toggle Switches** are compact and strong units that can be used in general electrical experiments. Sometimes they are standard components from the various excellent and robust IEC **Electricity Teaching Kit** ... e.g. EM1763-001 & EM1764-01

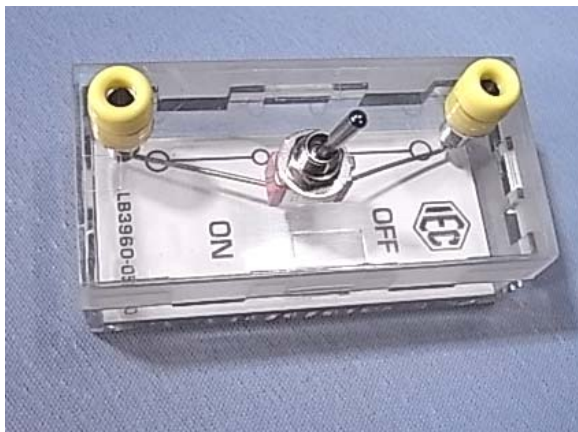

This sheet covers 2 types:

- SPST (Single Pole Single Throw). This means that only one circuit can be controlled and that the control is only ON and OFF. This is the simplest form of switch.
- DPST (Double Pole Single Throw) This means that 2 circuits are controlled, but the switching in each is only ON and OFF for both circuits at the same time.

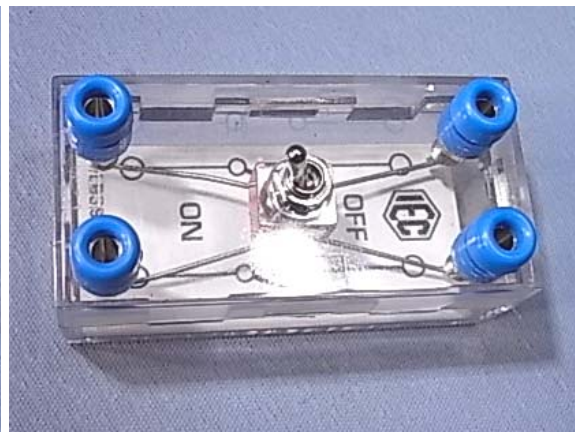

The standard symbol for each switch is printed clearly in the housing below the switch.

For export to Europe, we can supply these and many other electrical items with 4mm safety banana sockets.

**LB3960-050 SPST switch**

**LB3960-060 DPST switch**

**Physical size: 75x35x35mm LxWxTh**

**Weight: 0.1 kg**

**NOTE:** Other components of the Electricity Kit EM1763-001 and the Electronics Kit EM1764-001 are useful in the classroom as individual components. Please refer to the PA (Parts & Accessories) section of our listing for parts from these kits.

**Designed and manufactured in Australia**
